PROFESSIONAL SUMMARY

Computer Science graduate with knowledge of Python, Django, React.js, JavaScript, HTML5, CSS3, REST APIs, and MySQL. Experienced in developing responsive full-stack web applications with authentication, API integration, and database management. Passionate about building scalable applications, solving real-world problems, and learning modern backend technologies.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript (ES6+), SQL
- **Backend Technologies:** Django, Django REST Framework, RESTful APIs
- **Frontend Technologies:** React.js, Context API, HTML5, CSS3, Responsive Web Design
- **Database Management:** MySQL
- **GenAI:** AI-Assisted Code Generation
- **Tools, Frameworks & Concepts:** Object-Oriented Programming (OOP), Git, GitHub, VS Code

PROJECTS

Bus Reservation System

GitHub

- Developed a Django REST Framework and MySQL service utilizing atomic transactions and database row-level locking (`select_for_update`) to prevent concurrent seat double-bookings.
- Designed custom segment-based API logic to track seat availability across individual, non-overlapping route legs, maximizing seat allocation and bus utilization.
- Built two independent, fully responsive React frontends (Admin and User portals) using Vite, custom CSS layouts, and React Context API for global state management.
- Implemented secure authentication using DRF SimpleJWT, leveraging Axios interceptors to attach authorization headers and manage active user sessions.

Face Recognition Attendance System

GitHub

- Developed a Django-based attendance system using Python, OpenCV, dlib, and SQLite.
- Implemented real-time face recognition with blink-based liveness detection to prevent spoofing attacks.
- Built CRUD modules for managing students, departments, and attendance records through a Django admin dashboard.
- Added duplicate attendance prevention and configurable time-based attendance validation.
- Designed responsive frontend pages using Django templates, HTML, CSS, and JavaScript.

E-commerce Web Application

Live Demo

- Developed a full-featured e-commerce web application using React (Vite) and JavaScript.
- Implemented product search, cart, and wishlist with real-time state updates using Context API.
- Created a mock backend using json-server (REST API) to handle product data and simulate API calls.
- Integrated Firebase Authentication for secure user access.

CERTIFICATIONS

- Python Full Stack Development – Besant Technologies

EDUCATION

Bachelor of Engineering – Computer Science and Engineering

2021 – 2025

PET Engineering College, Vallioor, Tirunelveli

CGPA: 8.19

Higher Secondary (Class XII)

2020 – 2021 89%

Secondary (Class X)

2018 – 2019 84%
